If you have any further questions regarding mobility in pets, you will find useful information online:

MOBILITY

Key benefits - Canine Mobility C2P+™

ROYAL CANIN® Mobility C2P+™ diets contain select ingredients to meet the specific needs of your pet.

Contains C2P+™ joint complex: an innovative synergistic combination of Curcumin, hydrolysed Collagen, and green tea Polyphenols.

High quality studies attest to the supportive function of Mobility C2P+™

Exceptional palatability encourages healthy food intake and the daily integration of nutritional management as part of a multimodal approach for dogs with mobility issues.

Moderate calorie content to help maintain ideal weight and support joints stressed by excess weight.

Key benefits - Feline Mobility and Mobility Tabs

New Zealand Green-Lipped- Mussel extract with cartilage precursors to help maintain mobility.

EPA/DHA for additional support in helping maintain joint health.

A moderate phosphorus intake to help support healthy kidney function, particularly in the older cat.

The synergistic antioxidant complex helps reduce oxidative stress and helps neutralise free radicals.

MOBILITY

Dietary management for pets with mobility disorders

The recommended diet

Your Veterinary Surgeon has recommended a ROYAL CANIN® Mobility product to help maintain your dog or cat's joint health and activity levels. Feed Mobility diet or Mobility Tabs for a minimum of 6 weeks to see the greatest benefit to your pet's joint health.

Continue to feed long term unless otherwise advised by your Veterinary Surgeon.

MOBILITY C2P+

Helps maintain joint mobility in dogs.

MOBILITY SUPPORT TABS

To feed as a supplement to your dog or cat's daily meal.

MOBILITY

Helps maintain joint mobility in adult cats.

A diet to help maintain joint mobility in cats and dogs

Many of our pets will suffer from joint issues, particularly as they age. Reluctance to exercise, stiffness when getting out of bed, an ungroomed coat in a cat and general withdrawn behaviour can all indicate mobility issues.

You can help support your pets' joints on the advice of your veterinary practice and with the use of ROYAL CANIN® Mobility range.

Mobility Tablets are also available as a tasty supplement should you not want to change from your pet's normal food.

Antioxidants

ROYAL CANIN® Mobility diets are enriched without patented antioxidant complex (vitamin E, vitamin C, taurine and lutein) to help maintain health and vitality.

'Antioxidant' is a general term for nutrients such as vitamins, minerals and other components naturally present in many foods. Antioxidants neutralise free radicals produced during normal body metabolism that can cause damage to body cells. Free radical production increases when your pet is ill.

Key benefits - Canine Mobility C2P+™

ROYAL CANIN® Mobility C2P+™ diet is the only dog nutrition to feature the new patented breakthrough 'C2P+™ Joint Complex', our unique combination of three active compounds:

- Curcumin
- Hydrolysed Collagen
- Green tea extract (Polyphenols)

Individually, each of these nutrients is known to support joint health. Combined, they have been discovered to have a proven synergistic action, meaning that together their effects are greater than each nutrient alone. This really makes a difference in the long-term management of dogs with mobility issues.

Key benefits - Feline Mobility and Mobility Tabs

Feline Mobility diet and Mobility Tabs contain Green-Lipped Mussel, originating from New Zealand. The whole mussel is used, excluding the shell, and is prepared using a specially patented process to ensure the full benefits for your pet. Green-Lipped Mussel contains a synergistic complex of nutrients which all help to maintain joint health and ultimately activity levels in your pet. These nutrients are:

- Omega-3 fatty acids, including eicosatetraenoic acid, specific to Green-Lipped Mussel
- Chondroitin
- Glutamine
- Antioxidants
- Minerals

Answers to your questions

How do ROYAL CANIN® Mobility products meet the specific needs of my pet?

ROYAL CANIN® Mobility diets can help maintain your pet's joint health and activity levels at the same time as meeting all of your pet's day-to-day nutritional requirements.

My pet is taking prescribed medication for mobility problems. Can I give ROYAL CANIN® Mobility too?

Yes, it is perfectly safe to give Mobility diet or Tabs in addition to medication.

My pet is on a veterinary diet for a particular problem. Can I give Mobility Support Tabs alongside the diet?

This is often a safe and effective option but will depend on your pet's specific condition. Please consult your veterinary practice to determine the suitability of feeding both.

Does the Mobility range have additional benefits?

Yes - Canine Mobility C2P+™ dry and Mobility Feline have a moderate phosphorus content which helps support kidney function - useful for older pets who often suffer from both renal and joint issues. Both diets also have the S/O Index guarantee - this means the

diet helps create an environment unfavourable to the formation of urinary crystals.

Cats can benefit from Mobility Support Tabs too, simply feeding half a Tab daily can help maintain your cat's mobility.

Changing your pet's diet

Changing your pet's diet should always be carried out over several days. It is not uncommon for pets to refuse a new diet or to suffer from stomach or gut upsets if the change is not gradual. On day 1, begin by adding a small amount of the new diet to your pet's existing food. As each day passes, add more of the new diet to less of the original food, until eventually you are only feeding the new diet. This change should take around 5-7 days.

ROYAL CANIN® are leaders in palatability. We are so confident that your pet will enjoy their food that we offer a no quibble, money-back guarantee. Simply return the food to your veterinary practice for a full refund*.
