# SATIETY SUPPORT

## Key benefits

Royal Canin Satiety Support diets contain select ingredients to meet the specific needs of your pet.

High in select fibres to help promote a quick and lasting feeling of fullness and increase the daily ration volume.

A high protein content ensures maintenance of muscle mass, high diet palatability and helps give a feeling of satiety (fullness).

Chondroitin and glucosamine help to support mobility in the highly stressed joints of obese pets.

Omega-3 fatty acids from fish oils to help support a healthy skin and a shiny coat.

The high mineral and vitamin concentration means that exact requirements are fulfilled even when a smaller meal volume is fed.

# SATIETY SUPPORT

Dietary management for overweight pets

## The recommended diet

Royal Canin Satiety Support diet is important for the effective management of overweight pets. Designed for pets with specific weight-loss needs, we recommend feeding as advised by your veterinary practice. Royal Canin Satiety Support should be the sole source of food unless otherwise indicated by your Veterinary Surgeon.

## A specific diet for your pet

Pets, like humans nearly always become overweight because of an imbalance between intakes (calorie-dense meals) and outputs (exercise). The calories in the food that are not used for physical activity are stored as fat. Occasionally, metabolic disorders can also result in a pet becoming overweight, but over feeding and under-exercising are much more common causes.

Royal Canin Satiety Support is a highly palatable, complete diet for adult dogs and cats for use during weight reduction.

### High protein

The high protein content of Satiety Support ensures:

- Increased satiety (the 'full' feeling after a meal)
- Protein requirements are met despite restricted calorie content
- Lean (muscular) tissue is preserved during weight loss

The diet should be used as part of a complete weight reduction programme in combination with an increase in exercise and behavioural management where appropriate.

## Antioxidants

Royal Canin Satiety Support diet is enriched in antioxidants (vitamin E, vitamin C, taurine and lutein) to help maintain health and vitality.

'Antioxidant' is a general term for nutrients such as vitamins, minerals and other components naturally present in many foods.

Antioxidants neutralise free radicals produced even during normal body metabolism, but more so when your pet is ill.

## Key features

Key features of Royal Canin Satiety Support diets:

- Help achieve safe, healthy, controlled weight loss
- Maintain a balanced intake of protein, vitamin and minerals during weight loss
- Promote a lasting satiety effect due to a high, select fibre content
- High fibre content to increase the volume of food fed
- Chondroitin and glucosamine help support joints
- Help maintain good skin and coat condition
- L-carnitine assists fatty acid oxidation and use, so reducing conversion to body fat
- Ensures maintenance of lean body tissue/muscle mass
- Help maintain an average weight loss of approximately 0.5-3% per week
- High palatability
- Enriched with an exclusive antioxidant complex
- Feline Satiety Support is also available in portion controlled sachets for easy use and strict rationing

## Changing your pet's diet

Changing your pet's diet should always be carried out over several days. It is not uncommon for pets to refuse a new diet or to suffer from stomach upsets if the change is not gradual. On day 1, begin by adding a small amount of the new diet to your pet's existing food. As each day passes, add more of the new diet to less of the original food, until eventually you are only feeding the new diet. This change should take around 5-7 days.

Royal Canin are leaders in palatability. So confident are we that your pet will enjoy their food that we offer a no quibble, money-back guarantee. Simply return the food to your veterinary practice for a full refund\*.

## ANSWERS TO YOUR QUESTIONS

### Why should my pet lose weight?

The bodies of overweight pets are subject to many more strains and stressors than a lean animal. They are predisposed to a number of problems:

- Mobility disorders
- Exercise intolerance
- Liver disease
- Diabetes mellitus
- Greater surgical and anaesthetic risk
- Heat intolerance
- Poor coat and skin condition
- Lowered resistance to infectious diseases
- Overall reduced life expectancy

Being overweight is a danger to your pet's health and well-being. You can and should take efforts to prevent it and manage obesity were it is recognised by your Veterinary Surgeon or Veterinary Nurse.

### How long should my pet eat Royal Canin Satiety Support diet?

The length of time your pet will stay on a reducing diet depends on how much weight needs to be lost and their individual progress throughout the weight-management period. Weight should be reduced slowly to ensure your pet only loses fat tissue and stays otherwise healthy. To achieve this, your pet should lose 0.5 - 3% of their body weight per week. After reaching their ideal body weight, your veterinary practice may recommend a new ration or the use of a Veterinary Care Nutrition lifestage diet.

### How can I help my pet lose weight?

Your Veterinary Surgeon or Veterinary Nurse will set a target weight for your dog or cat and will recommend how much Royal Canin Satiety Support diet your pet should eat each day. It is very important that you keep to this recommendation. Your family and everyone else who comes in contact with your pet must understand that they must not give extra food, titbits, or treats.

In addition, weight loss for most pets should involve an increase in exercise such as walks or runs for dogs and increased play time for cats. If your pet is in poor health, or elderly, check with your Veterinary Surgeon before undertaking an increase in exercise.

Royal Canin Satiety Support is a highly palatable diet. It aims to ensure that your pet enjoys their meal and loses weight healthily, mimicking the likelihood of regain. Too rapid weight loss can lead to other illnesses particularly in obese cats.

### I'm afraid that my pet will feel hungry whilst on their diet!

Royal Canin Satiety Support diet provides the perfect solution for the slimming pet. It contains a low level of energy and the correct balance of nutrients in a palatable and satisfying meal. These diets have been developed to help your pet feel less hungry while on the diet. However, any pet on a low calorie diet may feel hungry, particularly to begin with. This usually abates after about 14 days on the diet.

### Feeding your pet for weight control

Your Veterinary Surgeon will set a target weight for your dog or cat and will recommend how much Royal Canin Satiety Support diet he or she should eat each day. These diets are designed to satisfy your cat or dog but provide fewer calories than normal food. Despite the reduction in calories all the vitamins and minerals needed to ensure a balanced diet are provided.
