## SATIETY WEIGHT MANAGEMENT

Available in  
400 g, 1.5, 3.5  
and 6 kg bags

### RECOMMENDED DAILY INTAKE & FEEDING DURATION

ADULT CAT	IDEAL WEIGHT (kg)	STAGE		
		START	IF NO LOSS AFTER 4 WEEKS <sup>2</sup>	SUGGESTED DAILY INTAKE AFTER WEIGHT LOSS
		grams	grams	grams
	2	28	22	30
	2.5	33	26	35
	3	38	30	40
	3.5	42	33	45
	4	46	37	49
	4.5	51	40	53
	5	54	43	58
	5.5	58	46	62
	6	62	49	65
	6.5	66	52	69
	7	69	55	73
	7.5	73	58	77
	8	76	60	80

<sup>2</sup> Review the weight loss plan including: BCS, ideal weight, feeding volume and measuring before making any adjustments.

**IDEAL WEIGHT** should be determined according to weight and BCS of the individual. The recommended daily intake is based on the pet's ideal weight. The starting ration may need to be adjusted during follow up visits. The optimal weight loss rate is 0.5-2% bodyweight per week.

**Maintenance Ration:** Energy requirements to maintain stable body weight after weight loss are lower than those of cats that have never been obese. It is recommended to continue feeding the weight loss diet once ideal or target weight has been achieved. To maintain ideal weight, gradually increase the daily food intake until weight has stabilised.

Maintenance rations may need to be adjusted based on the individual. If the cat regains more than 5% of body weight, the ration should be decreased to weight loss rations.

It is recommended to use digital food scales for measuring daily food allowance and divide the daily food intake into a minimum of 3 meals.

<sup>1</sup> Fanagan J et al. An international multi-centre cohort study of weight loss in overweight cats: Differences in outcome in different geographical locations. PLoS One. 2018 Jul 25;13(7):e0200414.

## WEIGHT MANAGEMENT

### RECOMMENDED FOR WEIGHT LOSS AND MAINTENANCE AFTER WEIGHT LOSS IN CASE OF

- Overweight/Obesity
- Stabilised Diabetes Mellitus with overweight/obesity
- Hyperlipidaemia with overweight/obesity

### NOT RECOMMENDED IN CASE OF

- Cats with a history of constipation in response to a high fibre diet
- Growth, gestation/lactation

### EFFECTIVE WEIGHT MANAGEMENT

Supports safe weight loss and helps limit weight regain. 97% of cats lost weight in 3 months.<sup>1</sup>

### BEGGING CONTROL

High natural fibre level helps keep cats satisfied between meals. Helped control begging in 82% of cats during weight loss.<sup>1</sup>

### MUSCLE MASS MAINTENANCE

High protein content helps support healthy weight loss while maintaining muscle mass.

### KEY VALUES

	Per 1000 kcal	Per 100g as fed
Crude Fibre:	48.03 g	14.60 g

	9	115	96	77
	9.5	120	100	80
	10	124	104	83

DIABETIC is recommended as first line nutritional management for all newly diagnosed cases of Diabetes Mellitus until control of clinical signs and hyperglycemia have been achieved.

NOTE: the use of this food may affect the cat's sensitivity to insulin. It is highly recommended that blood glucose and insulin response are monitored when starting the diet so that insulin dosage can be adapted. Once glycaemic control is reached, nutritional management should be guided by assessment of the Body Condition Score.

BCS ≤ 6/9: continue DIABETIC

BCS > 7/9: transition to SATIETY WEIGHT MANAGEMENT

It is highly recommended that blood glucose and insulin response are monitored when starting or changing the diet so that insulin dosage can be adapted.

It is recommended to divide the daily food intake into a minimum of 3 meals.

\*The diabetic patient should be regularly assessed for concurrent disease. If indicated, the nutritional management should be revised

## DIABETIC MELLITUS

### RECOMMENDED FOR CASES OF

- Diabetes Mellitus and a Body Condition Score (BCS) ≤ 6/9
- Diabetes Mellitus and a BCS > 7/9, until glycaemic control has been achieved

### NOT RECOMMENDED IN CASE OF

- Growth, gestation/lactation

### GLUCOMODULATION

Specific formula utilising cereals with a low glycaemic index and selected fibres to help in the management of post-prandial blood glucose in diabetic cats.

### HIGH PROTEIN

Helps reduce net energy supply and support the maintenance of muscle mass essential in diabetic cats.

### LOW STARCH

Formula contains a reduced level of starch to help limit post prandial blood glucose.

### KEY VALUES

	Per 1000 kcal	Per 100g as fed

## RECOMMENDED DAILY INTAKE & FEEDING DURATION

ADULT CAT	IDEAL WEIGHT (kg)	STAGE			
		WEIGHT LOSS		MAINTENANCE AFTER WEIGHT LOSS	
		grams	cups	grams	cups
	2	29	3/8	30	3/8
	2.5	34	3/8	36	4/8
	3	38	4/8	40	4/8
	3.5	43	4/8	45	4/8
	4	47	5/8	50	5/8
	4.5	51	5/8	54	5/8
	5	55	5/8	58	6/8
	5.5	59	6/8	62	6/8
	6	63	6/8	66	6/8
	6.5	66	6/8	70	7/8
	7	70	7/8	74	7/8
	7.5	73	7/8	78	1
	8	77	1	81	1
	8.5	80	1	85	1
	9	84	1	88	1 + 1/8
	9.5	87	1 + 1/8	92	1 + 1/8
	10	90	1 + 1/8	95	1 + 1/8

**Weight loss:** Individual target weight is determined and then feeding amount established. The recommended daily intake is based on the cat's ideal weight. The starting ration may need to be adjusted during follow-up visits, based on each individual's response and the rate of weight loss. An objective of losing 0.5-2 % bodyweight per week is generally achievable over the first 3 months, and of 0.5-1% afterwards.

**Maintenance after weight loss:** Energy requirements to maintain stable body weight after weight loss are lower than those of cats that have never had obesity. Based on current scientific knowledge, our maintenance after weight loss rations are calculated by increasing the weight loss ration by about 10%.

It is recommended to divide the daily intake into several meals and have fresh water available at all times.

**ROYAL CANIN® SATIETY + MOBILITY** dry is a complete dietetic feed for cats formulated for the reduction of excessive body weight and for the support of the metabolism of joints in the case of osteoarthritis. Low energy density, high levels of DHA and total omega-3 fatty acids, increased levels of methionine and manganese, and adequate level of vitamin E.

**RECOMMENDATIONS:** your advice as a veterinarian is necessary before use and before extending the period of use of this diet. Feed this diet until target body weight is achieved and after if required to maintain target body weight. For cats, a transition period when starting the diet is advised. For an efficient weight loss or ideal weight maintenance, the recommended daily energy intake should not be exceeded. For the support of the metabolism of joints in the case of osteoarthritis, feed this diet initially up to 3 months before recheck. The diet may be continued for the cat's lifetime with vet follow-up.

## RECOMMENDED FOR CASES OF

### Weight management:

- Overweight/obesity: weight loss and maintenance after weight loss
- Stabilised diabetes mellitus with overweight/obesity
- Hyperlipidaemia with overweight/obesity

### Joint conditions/mobility:

- Osteoarthritis
- Joints in need of support after orthopaedic surgery or trauma
- Decreased mobility

## NOT RECOMMENDED IN CASES OF

- Growth, gestation/lactation
- Underweight
- Conditions where high fibre content is not recommended (eg: chronic constipation/history of constipation in response to a high fibre diet)

### EFFECTIVE WEIGHT MANAGEMENT

Provides safe weight loss and helps avoid weight regain. 97% of cats lost weight in 3 months using this nutritional approach.\*

### BEGGING CONTROL

High level of selected fibres helps keep cats satisfied between meals. Nutritional approach shown to help control begging in 82% of cats during weight loss.\*

### LOW CALORIE

Overweight can negatively impact mobility. Low calorie content to help achieve and maintain an ideal body weight, thus supporting healthy mobility.

### JOINT SUPPORT

With Green Lipped Mussel and a high level of omega-3 fatty acids (EPA+DHA) to support mobility and joints in the case of osteoarthritis.

This diet is formulated to promote a healthy urinary environment.

	10	89	7/8	95	1 + 1/8

**Weight loss:** Individual target weight is determined and then feeding amount established. The recommended daily intake is based on the cat's ideal weight. The starting ration may need to be adjusted during follow-up visits, based on each individual's response and the rate of weight loss. An objective of losing 0.5-2 % bodyweight per week is generally achievable over the first 3 months, and of 0.5-1% afterwards. Maintenance after weight loss: Energy requirements to maintain stable body weight after weight loss are lower than those of cats that have never had obesity. Based on current scientific knowledge, our maintenance after weight loss rations are calculated by increasing the weight loss ration by about 10%.

It is recommended to divide the daily intake into several meals and have fresh water available at all times.

**ROYAL CANIN® URINARY S/O + BLADDER COMFORT + SATIETY** dry is a complete dietetic feed for cats formulated for the dissolution of struvite stones, the reduction of struvite stone recurrence, for feline lower urinary tract disease and for the reduction of excessive body weight. Urine undersaturating or metabolising properties for struvite and/or urine acidifying properties.

**RECOMMENDATIONS:** your advice as a veterinarian is necessary before use and before extending the period of use of this diet. Feed this diet 5 to 12 weeks for the dissolution of struvite stones and initially up to 6 months before recheck for the reduction of struvite stone recurrence. Feed until the target body weight is achieved and after if required to maintain target body weight. For cats, a transition period when starting the diet is advised.

For an efficient weight loss or ideal weight maintenance, the recommended daily energy intake should not be exceeded. The diet may be continued for the cat's lifetime with vet follow-up.

## RECOMMENDED FOR CASES OF

### Urinary disorders:

- Feline Idiopathic Cystitis (FIC)
- Struvite uroliths and urethral plugs: dissolution and management of recurrence
- Calcium oxalate uroliths: management of recurrence
- Stress or anxiety-related urinary conditions
- Management of risk factors for Feline Lower Urinary Tract Disease (FLUTD) : overweight, insufficient water intake and exposure to increased environmental challenges

### Weight management:

- Overweight/obesity: weight loss and maintenance after weight loss
- Stabilised diabetes mellitus with concomitant overweight/obesity
- Hyperlipidaemia with concomitant overweight/obesity

## NOT RECOMMENDED FOR CASES OF

- Growth, gestation or lactation
- Azotaemic Chronic Kidney Disease (IRIS stage 2 to 4)
- Concurrent use of urine-acidifying drugs
- Congestive Heart Failure / Cardiac Disease (when sodium restriction is sought)
- Conditions where high fibre content is not recommended (eg: chronic constipation, severe arthritis making defecation difficult)

### STRUVITE DISSOLUTION

Helps dissolve struvite stones

### HYDRATION SUPPORT

This diet encourages cats' natural drinking behaviour. It promotes urine dilution thus limiting urine saturation.

### BLADDER COMFORT

This diet contains a combination of nutrients to address the leading risk factors of FLUTD including FIC.

### WEIGHT MANAGEMENT

Formulated to support safe weight loss, control begging and help limit weight regain.

This diet is formulated to promote a healthy urinary environment.

6	1+	69	55	40
8	1+	89	71	53

WEIGHT MANAGEMENT  
CALCULATIONS

HOW TO CALCULATE IDEAL BODY WEIGHT

BODY CONDITION SCORE	VARIATION FROM IDEAL BODY WEIGHT	CALCULATION
5	100% Ideal body weight	Ideal body weight
6	10% Overweight	$\frac{\text{Current body weight}}{1.1}$
7	20% Overweight	$\frac{\text{Current body weight}}{1.2}$
8	30% Overweight	$\frac{\text{Current body weight}}{1.3}$
9	40% Overweight	$\frac{\text{Current body weight}}{1.4}$

CALCULATING PERCENTAGE WEIGHT LOSS

1

$$\frac{\text{Weight lost}}{\text{Body weight at last weigh-in}} \times 100$$

2

Example:  
33.6kg dog lost 0.9kg

$$\frac{0.9}{33.6} \times 100 = 2.7\%$$

Divide by number of weeks on diet to get average weight loss per week

3

Safe weight loss:-  
Dogs = 1-3% per week\*

Cats = 0.5-2% per week

Average weight loss for cats and dogs is 0.8% per week.

\*for the first 12 weeks

60	566	485	533	
70	635	544	599	
80	702	602	662	
90	767	657	723	

<sup>1</sup>For dogs less than 10kg it is recommended to use Satiety Small Dog

<sup>2</sup>Review the weight loss plan including: BCS, ideal weight, feeding volume and measuring before making any adjustments.

**IDEAL WEIGHT** should be determined according to weight and BCS of the individual. The recommended daily intake is based on the pet's ideal weight. The starting ration may need to be adjusted during follow up visits. An objective of losing 1-3% bodyweight per week is generally achievable over the first 3 months, and of 0.5-2% afterwards.

**MAINTENANCE RATION:** Energy requirements to maintain stable body weight after weight loss are lower than those of dogs that have never been obese. It is recommended to continue feeding the weight loss diet once ideal or target weight has been achieved. To maintain ideal weight, gradually increase the daily food intake until weight has stabilised. Maintenance rations may need to be adjusted based on the individual. If the dog regains more than 5% of body weight, the ration should be decreased to weight loss rations.

It is recommended to use digital food scales for measuring daily food allowance and divide the daily food intake into a minimum of 2 meals.

## WEIGHT MANAGEMENT

### RECOMMENDED FOR WEIGHT LOSS / MAINTENANCE AFTER WEIGHT LOSS IN CASE OF

- Overweight/Obesity
- Stabilised Diabetes Mellitus with overweight/obesity
- Hyperlipidaemia with overweight/obesity

### NOT RECOMMENDED IN CASE OF

- Dogs with a history of constipation in response to a high fibre diet
- Growth, gestation/lactation

### EFFECTIVE WEIGHT MANAGEMENT

Supports safe weight loss and helps limit weight regain. 97% of dogs lost weight in 3 months<sup>1</sup>.

### BEGGING CONTROL

High natural fibre level helps keep dogs satisfied between meals. Helped control begging in 83% of dogs during weight loss<sup>1</sup>.

### MUSCLE MASS MAINTENANCE

High protein content helps support healthy weight loss while maintaining muscle mass.

<sup>1</sup>Flanagan J et al. Success of a weight loss plan for overweight dogs: the results of an international weight loss study. PLoS One 2017;12(9):e0184199.

## DIABETIC

Available in  
1.5, 7 and  
12kg bags

### RECOMMENDED DAILY INTAKE & FEEDING DURATION

	DOG'S WEIGHT (kg)	BODY CONDITION		
		THIN	NORMAL	OVERWEIGHT
ADULT DOG		grams	grams	grams
	2	61	54	46
	4	103	91	78
	6	139	123	106
	8	173	152	131
	10	205	180	155
	15	277	244	211
	20	344	303	261
	25	407	358	309
	30	466	410	354
	35	523	461	398
	40	578	509	440
	45	632	556	480
	50	684	602	520
	55	735	646	558
	60	784	690	596
	70	880	775	669
	80	973	856	739

DIABETIC is recommended as first line nutritional management for all newly diagnosed cases of Diabetes Mellitus until control of clinical signs and hyperglycemia have been achieved. Diabetic patients should be regularly assessed for concurrent disease. If indicated, nutritional management should be reviewed.

It is recommended to use digital food scales for measuring daily food allowance.

**NOTE: The use of this food may affect the dog's sensitivity to insulin. It is highly recommended that blood glucose and insulin response are monitored when starting the diet so that insulin dosage can be adapted.**

## DIABETIC MELLITUS

### RECOMMENDED FOR CASES OF

- Diabetes Mellitus and a Body Condition Score (BCS) < 6/9
- Diabetes Mellitus and a BCS > 7/9, until glycaemic control has been achieved after which transition to SATIETY for weight loss

### NOT RECOMMENDED IN CASE OF

- Growth, gestation/lactation

### GLUCOMODULATION

Specific formula utilising cereals with a low glycaemic index and selected fibres to help in the management of post-prandial blood glucose in diabetic dogs.

### HIGH PROTEIN

Helps reduce net energy supply and support maintenance of muscle mass essential in diabetic dogs.

### LOW STARCH

Formula contains a reduced level of starch to help limit post-prandial blood glucose.

### KEY VALUES

	Per 1000 kcal	Per 100g as fed
Moisture	27.64 g	9.50 g

	80	4083	10	3593	8 + 3/4	3103	7 + 2/4

One can is equivalent to 92 g of DIABETIC dry product.

DIABETIC is recommended as first line nutritional management for all newly diagnosed cases of Diabetes Mellitus until control of clinical signs and hyperglycemia have been achieved. Diabetic patients should be regularly assessed for concurrent disease. If indicated, nutritional management should be reviewed.

**NOTE:** The use of this food may affect the dog's sensitivity to insulin. It is highly recommended that blood glucose and insulin response are monitored when starting the diet so that insulin dosage can be adapted.

## DIABETIC MELLITUS

#### RECOMMENDED FOR CASES OF

- Diabetes Mellitus and a Body Condition Score (BCS)  $\leq 6/9$
- Diabetes Mellitus and a BCS  $\geq 7/9$ , until glycaemic control has been achieved, after which transition to SATIETY for weight loss

#### NOT RECOMMENDED IN CASE OF

- Growth, gestation/lactation

#### GLUCOMODULATION

Specific formula utilising cereals with a low glycaemic index and selected fibres to help in the management of post-prandial blood glucose in diabetic dogs.

#### HIGH PROTEIN

Helps reduce net energy supply and support maintenance of muscle mass essential in diabetic dogs.

#### LOW STARCH

Formula contains a reduced level of starch to help limit post-prandial blood glucose.

	70	536	6 + 5/8	590	7 + 2/8
	80	593	7 + 2/8	652	8

**Weight loss:** Individual target weight is determined and then feeding amount established. The recommended daily intake is based on the dog's ideal weight. The starting ration may need to be adjusted during follow-up visits, based on each individual's response and the rate of weight loss. An objective of losing 1-3% bodyweight per week is generally achievable over the first 3 months, and of 0.5-2% afterwards.

**Maintenance after weight loss:** Energy requirements to maintain stable body weight after weight loss are lower than those of dogs that have never had obesity. Based on current scientific knowledge, our maintenance after weight loss rations are calculated by increasing the weight loss ration by about 10%. It is recommended to divide the daily intake into at least 2 meals and have fresh water available at all times. Maximum benefits on mobility support are expected after 6 to 8 weeks feeding.

**ROYAL CANIN® SATIETY + MOBILITY** dry is a complete dietetic feed for dogs formulated for the reduction of excessive body weight.

**RECOMMENDATIONS:** your advice as a veterinarian is necessary before use of this diet. Feed until target body weight is achieved and after if required to maintain target body weight. For an efficient weight loss or ideal weight maintenance, the recommended daily energy intake should not be exceeded. The diet may be continued for the dog's lifetime with vet follow-up.

#### RECOMMENDED FOR CASES OF

##### Weight management:

- Overweight/obesity: weight loss and maintenance after weight loss
- Stabilised diabetes mellitus with overweight/obesity
- Hyperlipidemia with overweight/obesity

##### Mobility:

- Decreased mobility
- Joints in need of support after orthopaedic surgery or trauma

#### NOT RECOMMENDED IN CASES OF

- Growth, gestation/lactation
- Underweight
- Conditions where high fibre content is not recommended (eg: chronic constipation/history of constipation in response to a high fibre diet)

#### EFFECTIVE WEIGHT MANAGEMENT

Provides safe weight loss and helps avoid weight regain. 97% of dogs lost weight in 3 months using this nutritional approach\*.

#### BEGGING CONTROL

High level of selected fibres helps keep dogs satisfied between meals. Nutritional approach shown to help control begging in 83% of dogs during weight loss\*.

#### LOW CALORIE

Overweight can negatively impact mobility. Low calorie content to help achieve and maintain an ideal body weight, thus supporting healthy mobility.

#### JOINT COMPLEX

Increased level of green-tipped mussel and high level of omega-3 fatty acids (EPA+DHA) to support mobility and help maintain healthy joints.

Weight loss: Individual target weight is determined and then feeding amount established. The recommended daily intake is based on the dog's ideal weight. The starting ration may need to be adjusted during follow-up visits, based on each individual's response and the rate of weight loss. An objective of losing 1-3% bodyweight per week is generally achievable over the first 3 months, and of 0.5-2% afterwards. Maintenance after weight loss: Energy requirements to maintain stable body weight after weight loss are lower than those of dogs that have never had obesity. Based on current scientific knowledge, our maintenance after weight loss rations are calculated by increasing the weight loss ration by about 10%.

It is recommended to divide the daily intake into at least 2 meals and have fresh water available at all times. When a food allergy or a food intolerance is suspected, the dog's diet may be changed without any food transition; otherwise a classical transition can be done (over 4-5 days).

ROYAL CANIN® HYPOALLERGENIC + SATIETY SMALL DOGS dry is a complete dietetic feed for dogs formulated for the reduction of ingredient and nutrient intolerances and for the reduction of excessive body weight. Hydrolysed protein sources and selected carbohydrate sources.

RECOMMENDATIONS: your advice as a veterinarian is necessary before use and before extending the period of use of this diet. For the reduction of ingredient and nutrient intolerances, feed 3 to 8 weeks: if signs of intolerance disappear this feed can be used initially up to one year before recheck. Feed until target body weight is achieved and after if required to maintain target body weight. For an efficient weight loss or ideal weight maintenance, the recommended daily energy intake should not be exceeded. The diet may be continued for the dog's lifetime with vet follow-up.

### RECOMMENDED FOR CASES OF

Dermatological/GI conditions:

- Adverse Food Reactions [AFR]
- Canine Atopic Dermatitis [CAD]
- Chronic Enteropathy, including Inflammatory Bowel Disease [IBD]
- GI conditions requiring a high fibre level
- Fibre responsive colitis/diarrhoea (including stress diarrhoea)

+

Weight management:

- Overweight/obesity: weight loss and maintenance after weight loss
- Stabilised diabetes mellitus with concomitant overweight/obesity
- Hyperlipidaemia with concomitant overweight/obesity

NOT RECOMMENDED FOR CASES OF

- Growth, gestation or lactation
- Conditions where high fibre content is not recommended (eg: chronic constipation, severe arthritis making defecation difficult)

#### HYDROLYSED PROTEIN

Hydrolysed protein with low molecular weight to ensure the food is hypoallergenic.

#### SKIN BARRIER

Formulated to support the skin's natural protective barrier for optimal skin health.

#### EFFECTIVE WEIGHT MANAGEMENT

Provides safe weight loss and helps avoid weight regain. 97% of dogs lost weight in 3 months using this nutritional approach\*

#### BEGGING CONTROL

High level of selected fibres helps to keep dogs satisfied between meals. Nutritional approach shown to help control begging in 83% of dogs during weight loss\*

#### SMALL KIBBLE

Carefully calibrated kibble size to fit small jaws.

\*Flanagan J. et al (2017) Success of a weight loss plan for overweight dogs: The results of an international weight loss study. PLoS ONE 12(9): e0184199.

Weight loss: Individual target weight is determined and then feeding amount established. The recommended daily intake is based on the dog's ideal weight. The starting ration may need to be adjusted during follow-up visits, based on each individual's response and the rate of weight loss. An objective of losing 1-3% bodyweight per week is generally achievable over the first 3 months, and of 0.5-2% afterwards. Maintenance after weight loss: Energy requirements to maintain stable body weight after weight loss are lower than those of dogs that have never had obesity. Based on current scientific knowledge, our maintenance after weight loss rations are calculated by increasing the weight loss ration by about 10%.

It is recommended to divide the daily intake into at least 2 meals and have fresh water available at all times.

ROYAL CANIN® URINARY S/O + SATIETY SMALL DOGS dry is a complete dietetic feed for dogs formulated for the dissolution of struvite stones, the reduction of struvite stone recurrence and for the reduction of excessive body weight. Urine undersaturating or metastabilising properties for struvite and/or urine acidifying properties. RECOMMENDATIONS: your advice as a veterinarian is necessary before use and before extending the period of use of this diet. Feed this diet 5 to 12 weeks for the dissolution of struvite stones and initially up to 6 months before recheck for the reduction of struvite stone recurrence. Feed until target body weight is achieved and after if required to maintain target body weight. For an efficient weight loss or ideal weight maintenance the recommended daily energy intake should not be exceeded.

The diet may be continued for the dog's lifetime with vet follow-up.

#### RECOMMENDED FOR CASES OF

##### Urinary disorders:

- Struvite uroliths: dissolution and management of recurrence
- Calcium oxalate uroliths: management of recurrence
- Bacterial cystitis: management of secondary struvite crystalluria (in association with adequate antibiotic therapy)

+

##### Weight management:

- Overweight/obesity: weight loss and maintenance after weight loss
- Stabilised diabetes mellitus with concomitant overweight/obesity
- Hyperlipidaemia with concomitant overweight/obesity

##### NOT RECOMMENDED FOR CASES OF

- Growth, gestation or lactation
- Azotaemic Chronic Kidney Disease (IRIS stage 2 to 4)
- Concurrent use of urine-acidifying drugs
- Congestive Heart Failure/Cardiac Disease (when sodium restriction is sought)
- Conditions where high fibre content is not recommended (eg: chronic constipation, severe arthritis making defecation difficult)

##### URINE DILUTION

Urine dilution makes the urine less liable to form crystals.

##### LOW RSS

Helps lower the concentration of ions contributing to crystal formation.

##### HIGH PROTEIN

A high protein content helps maintain muscle mass throughout the weight loss period.

##### SATIETOGENIC EFFECT

Formulated with a special blend of fibres to promote satiety and reduce the spontaneous consumption of food.

##### SMALL KIBBLE

Carefully calibrated kibble size to fit small jaws.

[S/O INDEX]

This diet is formulated to create an environment unfavourable to the formation of struvite and calcium oxalate.

### KEY VALUES

COMPATIBLE WITH

Treats

SATIETY DIETS

RECOMMENDED DAILY INTAKE

Please consult your veterinarian if you have any questions.

Dog's weight	<2 kg	2-5 kg	6-10 kg	11-15 kg	16-20 kg	>20 kg
Max pieces per day	4	7	13	19	25	34

Do not feed more than the maximum number of treats per day indicated in the feeding guidelines. If you are giving treats, it is recommended to adjust the main meal portion size accordingly to maintain your pet's healthy body weight.

WEIGHT MANAGEMENT

TREATS COMPATIBLE WITH SATIETY DIETS

ROYAL CANIN® Treats were developed by experts in canine nutrition to ensure treating does not compromise the health benefits of your dog's diet.

HIGH PROTEIN

LESS THAN 3 KCAL PER PIECE

ANALYTICAL CONSTITUENTS	
Moisture	18%
Protein	26.7%
Fat Content	3.5%
Crude Fibre	8%
Crude Ash	5.1%
Metabolisable energy	2632Kcal/kg

CALORIES PER CHEW	
	2.6Kcal

COMPOSITION

Dehydrated poultry proteins, wheat flour, barley flour, glycerol, wheat gluten, cellulose powder, hydrolysed animal proteins.

ADDITIVES (KG)\*\*\*

Nutritional additives: Vitamin C: 440 mg, Vitamin E: 900 mg - Technological additives: Clinoptilolite of sedimentary origin: 8 g - Preservatives.
