

This resource has been produced with the greatest care and incorporates the most up-to-date scientific information and research findings. We recommend that you refer to our packaging as the primary reference for product information as this can change with time. Bearing in mind the diversity and complexity of clinical cases in dogs and cats, it is important to note that the suggestions in this resource for further tests and therapeutic options cannot be exhaustive. Under no circumstances should the treatments and dietary solutions suggested here replace examination by a veterinary surgeon.

The publishers and the authors will accept no responsibility for the failure of any of the treatments or nutritional solutions put forward in this resource. Not for use in Canada and in USA.

While the information is considered to be true and correct at the date of publication (**May 25**), changes in circumstances after the time of publication may impact on the accuracy of the information. Please refer to the digital copy available online at vetportal.royalcanin.co.uk for the most recent product data.

	10	117	98	78

In case of acute disease, regeneration of the intestinal villi requires the nutritional management to last for at least three weeks. Lifetime feeding may be necessary/beneficial in case of chronic disease. To optimise digestion, the recommended daily intake should be divided into several small meals.

[S/O®] This diet is formulated to promote a healthy urinary environment.
INDEX

GASTROINTESTINAL DISORDERS

RECOMMENDED FOR CASES OF

- Acute and chronic diarrhoea² • Gastritis
- Inflammatory Bowel Disease (IBD)¹ • Colitis²
- Maldigestion/Malabsorption
- Dysorexia, re-feeding after surgery
- Acute hepatopathy/hepatic lipidosis³

NOT RECOMMENDED IN CASES OF

- Hyperlipidaemia⁴ • Lymphangiectasia, exudative enteropathy⁴

¹ After a food elimination trial (if determined to not be a food responsive enteropathy).

² A food elimination trial is recommended for cases of chronic colitis or diarrhoea.

³ Without hepatic encephalopathy.

⁴ In these cases GASTROINTESTINAL MODERATE CALORIE would be more appropriate.

DIGESTIVE SUPPORT

A highly digestible formula with balanced fibres, including prebiotics, to support healthy digestion and transit.

HIGH ENERGY

A high energy content to reduce meal volume and decrease intestinal load.

MICROBIOME SUPPORT

Formula with selected prebiotics to support a healthy gut and intestinal microbiome.

KEY VALUES

	10	121	188	

* Weight at mating.

In case of acute disease, regeneration of the intestinal villi requires the nutritional management to last for at least three weeks. To optimise digestion, the recommended daily intake should be divided into several small meals.

REHYDRATION:

- Add twice the volume of hot water to the kibbles (20 mL of water per 10g of kibbles).
- Wait 15-20 minutes for the kibbles to get soaked.
- Mash with a fork to obtain a 'porridge' texture.
- Serve once cooled down (body or room temperature).

GASTROINTESTINAL DISORDERS

RECOMMENDED FOR KITTENS FROM WEANING TO ADULTHOOD (AND GESTATING/LACTATING MOTHERS) IN CASE OF

- Acute and chronic diarrhoea (including weaning diarrhoea)
- Gastritis
- Maldigestion/Malabsorption
- Dysorexia, re-feeding after surgery
- Inflammatory Bowel Disease (IBD)
- Colitis
- Acute hepatopathy/hepatic lipodosis¹

¹ Without hepatic encephalopathy.

DIGESTIVE SUPPORT

A highly digestible formula with balanced fibres, including prebiotics, to support healthy digestion and transit.

OPTIMAL GROWTH

High energy formula with adapted levels of nutrients (including protein and calcium) to meet the needs of a growing kitten.

MICROBIOME SUPPORT

Formula with selected prebiotics to support a healthy gut and intestinal microbiome.

KEY VALUES

In case of acute disease, regeneration of the intestinal villi requires nutritional management to last for at least three weeks. Lifetime feeding may be necessary/beneficial in case of chronic disease. To optimise digestion, the recommended daily intake should be divided into several small meals.

[S/O®] This diet is formulated to promote a healthy urinary environment.

GASTROINTESTINAL DISORDERS

RECOMMENDED FOR OVERWEIGHT CATS (OR CATS WITH TENDENCY TO BE OVERWEIGHT) IN CASE OF

- Acute and chronic diarrhoea • Gastritis
- Inflammatory Bowel Disease (IBD)¹ • Colitis²
- Maldigestion/Malabsorption
- Dysorexia, re-feeding after surgery

ALL CATS IN CASE OF

- Pancreatitis or history of pancreatitis
- Hyperlipidaemia
- Lymphangiectasia, exudative enteropathy

NOT RECOMMENDED IN CASES OF

- Growth, gestation/lactation

¹ After a food elimination trial (if determined to not be a food responsive enteropathy).
² A food elimination trial is recommended for cases of chronic colitis or diarrhoea.

DIGESTIVE SUPPORT

A highly digestible formula with balanced fibres, including prebiotics, to support healthy digestion and transit.

MODERATE CALORIE

Moderate calorie content to help maintain ideal weight.

MICROBIOME SUPPORT

Formula with selected prebiotics to support a healthy gut and intestinal microbiome.

KEY VALUES

1 pouch is equivalent to 17g of GASTROINTESTINAL MODERATE CALORIE dry product

In case of acute disease, regeneration of the intestinal villi requires the nutritional management to last for at least three weeks. Lifetime feeding may be necessary/beneficial in case of chronic disease. To optimise digestion, the recommended daily intake should be divided into several small meals.

**[S/O®]
INDEX]**

This diet is formulated to promote a healthy urinary environment.

GASTROINTESTINAL DISORDERS

RECOMMENDED FOR OVERWEIGHT CATS (OR CATS WITH TENDENCY TO BE OVERWEIGHT) IN CASE OF

- Acute and chronic diarrhoea
- Gastritis
- Inflammatory Bowel Disease (IBD)¹
- Colitis²
- Maldigestion/Malabsorption
- Dysorexia, re-feeding after surgery

ALL CATS IN CASE OF

- Pancreatitis or history of pancreatitis
- Hyperlipidaemia
- Lymphangiectasia, exudative enteropathy

NOT RECOMMENDED IN CASES OF

- Growth, gestation/lactation

¹ After a food elimination trial (if determined to not be a food responsive enteropathy).
² A food elimination trial is recommended for cases of chronic colitis or diarrhoea.

DIGESTIVE SUPPORT

A highly digestible formula with balanced fibres, including prebiotics, to support healthy digestion and transit.

MODERATE CALORIE

Moderate calorie content to help maintain ideal weight.

MICROBIOME SUPPORT

Formula with selected prebiotics to support a healthy gut and intestinal microbiome.

KEY VALUES

	Per 1000 kcal	Per 100g as fed
Moisture	1169.00 g	82.20 g
Protein	107.00 g	7.50 g

A feeding duration of 3-4 weeks is recommended for a first presentation. For recurrent cases of constipation, consider long-term use of this diet.

[S/O®] This diet is formulated to promote a healthy urinary environment.

GASTROINTESTINAL DISORDERS

RECOMMENDED FOR CASES OF

- Acute or chronic constipation
- Megacolon of non obstructive origin (with close follow-up)¹

NOT RECOMMENDED IN CASES OF

- Growth, gestation or lactation
- Obstipation
- Obstructive megacolon
- Dehydration

¹ Fibres may increase faecal volume and water content, which is not indicated in cases of dehydration and / or constipation associated with obstruction or obstipation.

EASY TRANSIT

Specific formulation (including high levels of psyllium) to help manage feline constipation.

ADEQUATE ENERGY

Adequate energy levels to maintain a healthy bodyweight.

DIGESTIVE SUPPORT

A highly digestible formula, including prebiotics, to support healthy digestion and transit.

KEY VALUES

	Per 1000 kcal	Per 100g as fed
Ash	18.70 g	7.30 g

	9	122	102	82
	9.5	127	106	85
	10	132	110	88

For recurrent cases of frequent hairball formation, consider long-term use of GASTROINTESTINAL HAIRBALL. If constipation is associated, GASTROINTESTINAL FIBRE RESPONSE may be more appropriate.

[S/O]
INDEX

This diet is formulated to promote a healthy urinary environment.

GASTROINTESTINAL DISORDERS

RECOMMENDED FOR CASES OF

- Conditions requiring increased fibre content
- Recurrent hairball formation
- Fibre responsive colitis/diarrhoea
- Acute and chronic diarrhoea¹

NOT RECOMMENDED IN CASES OF

- Growth, gestation or lactation
- Obstipation
- Obstructive megacolon

¹ A food elimination trial is recommended for cases of chronic colitis or diarrhoea.

HAIRBALL COMPLEX

A specific blend of fibres (including psyllium) helps eliminate ingested hair and control hairball formation.

HIGH FIBRE

A fibre-rich diet to help regulate intestinal transit.

DIGESTIVE SUPPORT

A highly digestible formula, including prebiotics, to support a healthy digestion.

KEY VALUES

	Per 1000 kcal	Per 100g as fed
Ash	25.72 g	9.30 g
Moisture	15.21 g	5.50 g

	8.5	103	86	69
	9	108	90	72
	9.5	112	93	74
	10	116	97	77

Initially, a feeding duration of up to 6 months is advised but for chronic conditions, lifelong feeding may be necessary. Feeding duration may vary depending on the pathology.

In order to decrease postprandial hepatic load, it is recommended to divide the daily intake into several small meals.

This diet is formulated to promote a healthy urinary environment.

LIVER DISEASE

RECOMMENDED FOR CASES OF

- Cholangitis/Cholangiohepatitis associated with liver dysfunction
- Chronic hepatitis
- Hepatic encephalopathy
- Copper storage disease
- Portosystemic shunt

NOT RECOMMENDED IN CASES OF

- Growth, gestation or lactation
- Hepatic lipidosis without hepatic encephalopathy¹
- Acute hepatitis without hepatic encephalopathy¹

¹ In these cases the recommended diets are Gastrointestinal Hydrolysed Protein, Gastrointestinal, Gastrointestinal Kitten or Recovery.

ADAPTED PROTEIN CONTENT

Adapted levels of high quality proteins to support liver function in case of chronic liver insufficiency.

LOW COPPER

Low level of copper to help minimise its accumulation in liver cells.

HIGH ENERGY

A high energy content to reduce meal volume and decrease intestinal load.

KEY VALUES

	Per 1000 kcal	Per 100g as fed

Vitamin D	193.42 IU	80.00 IU

Metabolisable energy*

413.60 Kcal

*Calculated according to NRC 2006 CF.

COMPOSITION

Maize, rice, animal fats, wheat gluten**, dehydrated pork proteins**, maize gluten**, vegetable fibres, hydrolysed animal proteins**, minerals, chicory pulp, soya oil, fish oil, fructo-oligosaccharides, algal oil Schizochytrium sp. (source of DHA), yeasts (source of manno-oligosaccharides), marigold meal.

**Protein sources: 27%. Highly digestible ingredients: 75.3%.

ADDITIVES (KG)****

Nutritional additives: Vitamin A: 15000 IU, Vitamin D3: 800 IU, Vitamin E: 510 mg, Vitamin C: 210 mg, Taurine: 2.5 g, Iron (3b103): 41 mg, Iodine (3b201, 3b202): 2.6 mg, Copper (3b405, 3b406): 4 mg, Manganese (3b502, 3b504): 29 mg, Zinc (3b603, 3b605, 3b606): 159 mg, Selenium (3b801, 3b811, 3b812): 0.12 mg - Technological additives: Clinoptilolite of sedimentary origin: 10 g - Antioxidants.

**** Values reflect only levels added to the formula, not those naturally occurring in components of the diet.

RECOVERY

ULTRA SOFT MOUSSE

Available in
195g can

RECOMMENDED DAILY INTAKE & FEEDING DURATION

ADULT CAT	ENERGY LEVEL				
	CAT'S WEIGHT (kg)	Level 1 - Convalescing cat confined in a cage		Level 2 - Active cat, ending their convalescence period or in maintenance	
		grams	cans	grams	cans
	2	93	1/2	120	1/2
	2.5	110	1/2	141	3/4
	3	126	3/4	161	3/4
	3.5	141	3/4	179	1
	4	156	3/4	197	1
	4.5	171	1	214	1
	5	185	1	231	1 + 1/4
	5.5	199	1	247	1 + 1/4
	6	212	1	263	1 + 1/4
	6.5	225	1 + 1/4	278	1 + 1/2
	7	238	1 + 1/4	293	1 + 1/2
	7.5	251	1 + 1/4	308	1 + 1/2
	8	263	1 + 1/4	323	1 + 3/4
	8.5	275	1 + 1/2	337	1 + 3/4
	9	287	1 + 1/2	351	1 + 3/4
	9.5	299	1 + 1/2	365	1 + 3/4
	10	311	1 + 1/2	378	2

Two energy levels are described for cats during hospitalisation & convalescence:

• Level 1: Convalescing cats confined in cage

It is advised to meet the Resting Energy Requirements (R.E.R) according to the formula: $RER (in kcal/day) = 70 \times (body weight in kg)^{0.75}$

• Level 2: In maintenance

It is advised to meet the Maintenance Energy Requirements (M.E.R) according to the formula: $MER (in kcal/day) = 77.6 \times (body weight in kg)^{0.75}$

The amount of food should be re-evaluated according to the clinical evolution of the pet.

In case of anorexia, a **refeeding schedule** is strongly recommended:

• If anorexic for < 3 days: plan to meet the requirements in 3 days:

Day 1: 1/3 of requirements, day 2: 2/3 of requirements, day 3: full requirements.

• If anorexic for > 3 days: plan to meet the requirements in 5 days:

Day 1: 1/4 of requirements, day 2: 1/2 of requirements, day 3: 2/3 of requirements, day 4: 3/4 of requirements, day 5: full requirements.

It is recommended to divide the daily intake into several small meals. This product may be fed to kittens (feeding tables at the end of the feline Gastrointestinal Tract section).

CONVALESCENCE PERIOD

RECOMMENDED FOR CASES OF

- Convalescence • Re-feeding after anorexia period
- Malnutrition • Post-surgery and intensive care
- Hepatic lipidosis¹
- Tube feeding (tubes with diameter > 10Fr)¹

NOT RECOMMENDED IN CASES OF

- Hepatic encephalopathy²

¹ In tubes with diameter ≤ 10Fr, use RECOVERY LIQUID.

² In cases of hepatic encephalopathy the recommended diets are HEPATIC or RENAL LIQUID if tube feeding is needed.

HIGH ENERGY

High energy density that provides daily energy requirements in a reduced feeding volume.

EASY TUBE FEEDING

Specific texture that facilitates feeding by syringe and through feeding tubes.

HIGH PROTEIN

High protein level to help maintain muscle mass during hospitalisation and convalescence.

ROYAL CANIN® GASTROINTESTINAL HYDROLYSED PROTEIN dry is a complete dietetic feed for cats, formulated for the compensation for maldigestion and the reduction of ingredient and nutrient intolerances. A highly digestible feed with hydrolysed protein sources and selected carbohydrate sources.

RECOMMENDATIONS: It is recommended that a veterinarian's opinion be sought before use and before extending the period of use.

Feed GASTROINTESTINAL HYDROLYSED PROTEIN dry initially up to 12 weeks for compensation of maldigestion and lifetime in the case of chronic pancreatic insufficiency, and 3 to 8 weeks for reduction of ingredient and nutrient intolerances (initially up to one year if signs of intolerance disappear).

This diet is formulated to promote a healthy urinary environment.

RECOMMENDED FOR CASES OF

- Inflammatory Bowel Disease (IBD)
- Pancreatitis
- Exocrine Pancreatic Insufficiency (EPI)
- Adverse Food Reactions (AFR) with gastrointestinal and/or dermatological signs
- AFR - food elimination trial
- Acute and chronic diarrhoea
- Maldigestion/ Malabsorption
- Dysorexia, re-feeding after surgery
- Acute hepatopathy/hepatic lipidosis without hepatic encephalopathy

NOT RECOMMENDED FOR CASES OF

- Lymphangiectasia, exudative enteropathy¹
- Hyperlipidaemia¹
- Growth, gestation/lactation
- Acute hepatopathy/hepatic lipidosis with hepatic encephalopathy²

¹ In these cases the recommended diet is Gastrointestinal Moderate Calorie.

² In these cases the recommended diet is Hepatic.

HYDROLYSED PROTEIN

Highly digestible hydrolysed (soyl) protein, reducing the risk of food sensitivities that may cause recurrent gastrointestinal signs.

HIGH ENERGY

A high energy content to reduce meal volume and decrease intestinal load.

DIGESTIVE SUPPORT

A highly digestible formula with balanced fibres, including prebiotics, to support healthy digestion and transit.

KEY VALUES

	Per 1000Kcal	Per 100g as fed
Moisture	13.62 g	5.5 g
Protein	76.79 g	31 g
Fat content	49.54 g	20 g

Phosphorus	1.49 g	0.6 g
Potassium	2.48 g	1 g
Sodium	1.61 g	0.65 g
Chloride	2.72 g	1.1 g
Magnesium	0.12 g	0.05 g
Copper	5.2 mg	2.1 mg
Zinc	44.34 mg	17.9 mg
Metabolisable energy*		403.7 Kcal

*Calculated according to NRC 2006 CF.

Essential fatty acids (Linoleic acid: 3.9%, Arachidonic acid: 0.07%).

COMPOSITION

Hydrolysed soya protein isolate**, rice flour**, animal fats**, vegetable fibres, rice**, hydrolysed poultry protein**, minerals, beet pulp, fish oil**, fructo-oligosaccharides (0.54%), psyllium husks and seeds, yeasts [source of manno-oligosaccharides] (0.19%), marigold meal.

** Highly digestible ingredients (74.3%). Protein sources (31.1%): hydrolysed soya protein isolate, hydrolysed poultry protein. Carbohydrate sources (27.5%): rice.

ADDITIVES (KG)***

Nutritional additives: Vitamin A: 35688 IU, Vitamin D3: 795 IU, Vitamin E: 673 mg, Vitamin C: 200 mg, Taurine: 2.5 g, Iron (3b103): 41 mg, Iodine (3b201, 3b202): 3.6 mg, Copper (3b405, 3b406): 15 mg, Manganese (3b502, 3b504): 53 mg, Zinc (3b603, 3b605, 3b606): 157 mg, Selenium (3b801, 3b811, 3b812): 0.25 mg - Technological additives: Clinoptilolite of sedimentary origin: 10 g - Antioxidants.

*** Values reflect only levels added to the formula, not those naturally occurring in components of the diet.

RECOVERY LIQUID

Available in pack of
of 3 x 200ml bottles

RECOMMENDED DAILY INTAKE & FEEDING DURATION

ADULT CAT	ENERGY LEVEL: CONVALESCING CAT CONFINED IN A CAGE		
	CAT'S WEIGHT (kg)	ml/Day	Bottle/Day
	2	115	1/2
	2.5	135	3/4
	3	155	3/4
	3.5	175	1
	4	190	1
	4.5	210	1

	7.5	305	1 + 1/2
	8	320	1 + 1/2
	8.5	335	1 + 3/4
	9	350	1 + 3/4
	9.5	365	1 + 3/4
	10	380	2

Convolvescencng cats confned in cage

It is advised to meet the Restng Energy Requirements (R.E.R) according to the formula: **RER (in kcal/day) = 70x(body weight in kg)0.75**

The amount of food should be re-evaluated according to the clinical evolution of the pet.

In case of anorexia, a **refeedng schedule** is strongly recommended:

• **If anorexic for < 3 days:** plan to meet the requirements in 3 days. Day 1: 1/3 of requirements, day 2: 2/3 of requirements, day 3: full requirements.

• **If anorexic for ≥ 3 days:** plan to meet the requirements in 5 days. Day 1: 1/4 of requirements, day 2: 1/2 of requirements, day 3: 2/3 of requirements, day 4: 3/4 of requirements, day 5: full requirements.

It is recommended to divide the daily intake into several meals and have fresh water available at all times.

ROYAL CANIN® RECOVERY LIQUID is a complete dietetic feed for cats and dogs formulated for nutritional restoration and convalescence (including for feline hepatic lipidosis). High energy density, high concentrations of essential nutrients and highly digestible ingredients.

RECOMMENDATIONS: your advice as a veterinarian is necessary before use of this diet, and administration under veterinary supervision. Feed this diet until restoration is achieved.

CONVALESCENCE PERIOD

RECOMMENDED FOR TUBE-FEEDING IN CASES OF

- Convalescence support • Re-feeding after period of anorexia
- Malnutrition • Post-surgery and intensive care
- Hepatic lipidosis¹ (without hepatic encephalopathy)
- Post-surgery and intensive care
- Acute and chronic diarrhoea

NOT RECOMMENDED IN CASES OF

- Hepatic encephalopathy¹ • Growth, gestation and lactation

¹ In cases of hepatic encephalopathy the recommended diet is Renal Liquid

¹ In cases of hepatic encephalopathy the recommended diet is Renal Liquid.

² In this case the recommended diet is Gastrointestinal Low Fat Liquid.

HIGH PROTEIN

High protein level to help maintain muscle mass during hospitalisation and convalescence.

ADAPTED ENERGY (1kcal/mL)

High energy density that provides daily energy requirements in a reduced feeding volume.

COMPLETE NUTRITION

Complete and balanced liquid diet to support nutritional restoration and convalescence of dogs requiring assisted enteral nutrition.

EASY TUBE FEEDING

Liquid formula with adapted viscosity for an easy use whatever the tube size.

SPECIAL CAP – EASY TO FILL

Cap designed for easy filling, with one hole for standard-tip syringes (the smaller) and another for catheter-tip syringes.

KEY VALUES

	Per 1000 kcal	Per 100g as fed

	80	812	714	617

In cases of acute disease, regeneration of the intestinal villi requires nutritional management to last for at least three weeks. Lifetime feeding may be necessary/beneficial in case of chronic disease. To optimise digestion, the recommended daily intake should be divided into several small meals.

GASTROINTESTINAL DISORDERS

RECOMMENDED FOR CASES OF

- Acute and chronic diarrhoea (including weaning diarrhoea)
- Gastritis • Maldigestion/Malabsorption
- Dysorexia, re-feeding after surgery
- Inflammatory Bowel Disease (IBD)¹
- Colitis² • Exocrine Pancreatic Insufficiency (EPI)
- Acute hepatopathy³

NOT RECOMMENDED IN CASES OF

- Pancreatitis or history of pancreatitis⁴
- Hyperlipidaemia⁴
- Lymphangiectasia, exudative enteropathy⁴

¹ After a food elimination trial (if determined to not be a food responsive enteropathy).

² A food elimination trial is recommended for cases of chronic colitis or diarrhoea.

³ Without hepatic encephalopathy.

⁴ In these cases the recommended diet is GASTROINTESTINAL LOW FAT.

DIGESTIVE SUPPORT

A highly digestible formula with balanced fibres, including prebiotics, to support healthy digestion and transit.

HIGH ENERGY

A high energy content to reduce meal volume and decrease intestinal load.

MICROBIOME SUPPORT

Formula with selected prebiotics to support a healthy gut and intestinal microbiome.

Metabolisable energy*

110.40 Kcal

*Calculated according to NRC 2006 CF.

COMPOSITION

Pork by-products**, poultry by-products**, rice**, salmon**, sunflower oil refined***, powder cellulose, minerals, pork blood products**, dried beet pulp, fish oil***, yeasts and part thereof, marigold meal.

Highly digestible ingredients:

**Highly digestible protein sources: 52%,

***highly digestible fat sources: 1.5%.

ADDITIVES (KG)****

Nutritional additives: Vitamin A: 1700 IU, Vitamin D3: 190 IU, Vitamin E: 150 mg, Vitamin C: 88 mg, Taurine: 0.6 g, Iron (3b103): 8 mg, Iodine (3b202): 0.62 mg, Copper (3b405, 3b406): 3 mg, Manganese (3b502, 3b503, 3b504): 8.1 mg, Zinc (3b603, 3b605, 3b606): 24 mg, Selenium (3b801, 3b811, 3b812): 0.04 mg - Technological additives: Clinoptilolite of sedimentary origin: 2.5g.

**** Values reflect only levels added to the formula, not those naturally occurring in components of the diet.

GASTROINTESTINAL PUPPY

Available in
1, 2.5 and
10kg bags

RECOMMENDED DAILY INTAKE & FEEDING DURATION

PUPPY'S AGE (in months)	ADULT WEIGHT		
	2kg grams	5kg grams	10kg grams
1-2	39-47	65-90	91-141
3-4	52-54	101-106	166-176
5-6	53-46	106-96	179-178
7-8	39-38	86-76	161-144
9-10	38	76-75	129-128
11-12			126
GESTATION (in weeks)	MOTHER'S WEIGHT ² (kg)		
	2kg	5kg	10kg
1-5	44	87	146
6-7	48-52	96-104	161-175
8-9	57-61	113-122	190-204
Gestation	20kg	30kg	40kg
	2kg	5kg	10kg
1-5	246	333	413
6-7	270-295	366-400	454-496
8-9	319-344	433-466	537-578

LACTATION > ad libitum.

² Weight at mating

In case of acute disease, regeneration of the intestinal villi requires the nutritional management to last for at least 3 weeks. To optimise digestion, the recommended daily intake should be divided into several small meals.

REHYDRATION:

- Add twice the volume of hot water to the kibbles (20 mL of water per 10g of kibbles).
- Wait 15-20 minutes for the kibbles to get soaked.
- Mash with a fork to obtain a porridge texture
- Serve once cooled down (body or room temperature)

GASTROINTESTINAL DISORDERS

RECOMMENDED FOR PUPPIES FROM WEANING TO ADULTHOOD (AND GESTATING/LACTATING BITCHES) IN CASE OF

- Acute and chronic diarrhoea (including weaning diarrhoea)
- Gastritis • Maldigestion/Malabsorption
- Dysorexia, re-feeding after surgery
- Inflammatory Bowel Disease (IBD)¹
- Colitis² • Exocrine Pancreatic Insufficiency (EPI)
- Acute hepatopathy³

NOT RECOMMENDED IN CASES OF

- Pancreatitis or history of pancreatitis
- Hyperlipidaemia
- Lymphangiectasia, exudative enteropathy

1 After a food elimination trial (if determined to not be a food responsive enteropathy).

2 A food elimination trial is recommended for cases of chronic colitis or diarrhoea.

3 Without hepatic encephalopathy.

DIGESTIVE SUPPORT

A highly digestible formula with balanced fibres, including prebiotics, to support healthy digestion and transit.

OPTIMAL GROWTH

High energy formula with adapted levels of nutrients (including protein and calcium) to meet the needs of a growing puppy.

MICROBIOME SUPPORT

Formula with selected prebiotics to support a healthy gut and intestinal microbiome.

KEY VALUES

	Per 1000 kcal	Per 100g as fed

LACTATION> ad libitum. * Weight at mating

1 can is equivalent to 45g of GASTROINTESTINAL PUPPY dry product.

In case of acute disease, regeneration of the intestinal villi requires the nutritional management to last for at least three weeks. To optimise digestion, the recommended daily intake should be divided into several small meals.

GASTROINTESTINAL DISORDERS

RECOMMENDED FOR PUPPIES FROM WEANING TO ADULTHOOD (AND GESTATING/LACTATING BITCHES) IN CASE OF

- Acute and chronic diarrhoea (including weaning diarrhoea)
- Gastritis
- Maldigestion/Malabsorption
- Dysorexia, re-feeding after surgery
- Inflammatory Bowel Disease (IBD)¹
- Colitis²
- Exocrine Pancreatic Insufficiency (EPI)
- Acute hepatopathy³

NOT RECOMMENDED IN CASES OF

- Pancreatitis or history of pancreatitis⁴
- Hyperlipidaemia⁴
- Lymphangiectasia, exudative enteropathy⁴

¹ After a food elimination trial (if determined to not be a food responsive enteropathy).

² A food elimination trial is recommended for cases of chronic colitis or diarrhoea.

³ Without hepatic encephalopathy.

⁴ In these cases contact the Royal Canin Nutritional Helpline for further advice.

DIGESTIVE SUPPORT

A highly digestible formula with balanced fibres, including prebiotics, to support healthy digestion and transit.

OPTIMAL GROWTH

High energy formula with adapted levels of nutrients (including protein and calcium) to meet the needs of a growing puppy.

MICROBIOME SUPPORT

Formula with selected prebiotics to support a healthy gut and intestinal microbiome.

KEY VALUES

	Per 1000 kcal	Per 100g as fed

	60	746	656	567
	70	837	737	636
	80	925	814	703

In cases of acute disease, regeneration of the intestinal villi requires nutritional management to last for at least three weeks. Lifetime feeding may be necessary/beneficial in case of chronic disease. To optimise digestion, the recommended daily intake should be divided into several small meals.

GASTROINTESTINAL DISORDERS

RECOMMENDED FOR OVERWEIGHT DOGS (OR DOGS WITH TENDENCY TO BE OVERWEIGHT) IN CASE OF

- Acute and chronic diarrhoea
- Gastritis • Maldigestion/Malabsorption
- Dysorexia, re-feeding after surgery
- Mild or moderate chronic pancreatitis
- Inflammatory Bowel Disease (IBD)¹
- Colitis² • Exocrine Pancreatic Insufficiency (EPI)

NOT RECOMMENDED IN CASES OF

- Growth, gestation or lactation
- Acute or severe chronic pancreatitis³
- Hyperlipidaemia³
- Lymphangiectasia, exudative enteropathy³

¹ After a food elimination trial (if determined to not be a food responsive enteropathy).

² A food elimination trial is recommended for cases of chronic colitis or diarrhoea.

³ In these cases the recommended diet is GASTROINTESTINAL LOW FAT.

DIGESTIVE SUPPORT

A highly digestible formula with balanced fibres, including prebiotics, to support healthy digestion and transit.

MODERATE CALORIE

Moderate calorie content to help maintain ideal weight.

MICROBIOME SUPPORT

Formula with selected prebiotics to support healthy gut and intestinal microbiome.

KEY VALUES

	Per 1000 kcal	Per 100g as fed

	60	777	683	590
	70	872	767	663
	80	964	848	732

Initially, a feeding duration of up to 2 months is advised. For chronic conditions, lifelong feeding may be necessary. The feeding duration varies depending on the severity of gastrointestinal signs.

To optimise digestion, the recommended daily intake should be divided into several small meals.

GASTROINTESTINAL DISORDERS

RECOMMENDED FOR CASES OF

- Hyperlipidaemia
- Acute and chronic pancreatitis
- Lymphangiectasia, exudative enteropathy
- Exocrine Pancreatic Insufficiency (EPI)¹
- Delayed gastric emptying, oesophagitis
- Acute and chronic diarrhoea²

NOT RECOMMENDED IN CASES OF

- Growth, gestation/lactation

¹In the case of EPI, the first line recommendation is GASTROINTESTINAL.

²A food elimination trial is recommended for cases of chronic colitis or diarrhoea.

LOW FAT

For the nutritional management of dogs needing a fat restricted diet.

FIBRE BALANCE

Limited fibre content to allow provision of maintenance energy levels despite fat restriction.

DIGESTIVE SUPPORT

A highly digestible formula with balanced fibres, including prebiotics, to support healthy digestion and transit.

KEY VALUES

	Per 1000 kcal	Per 100g as fed

1 can is equivalent to 111g of GASTROINTESTINAL LOW FAT dry product.

1 can is equivalent to 111g of GASTROINTESTINAL SMALL DOGS LOW FAT dry product. The feeding duration varies depending on the severity of gastrointestinal signs. To optimise digestion, the recommended daily intake should be divided into several small meals.

GASTROINTESTINAL DISORDERS

RECOMMENDED FOR CASES OF

- Hyperlipidaemia
- Acute and chronic pancreatitis
- Lymphangiectasia, exudative enteropathy¹
- Exocrine Pancreatic Insufficiency (EPI)
- Delayed gastric emptying, oesophagitis
- Oesophagitis
- Acute and chronic diarrhoea²

NOT RECOMMENDED IN CASES OF

- Growth, gestation/lactation

¹ In the case of EPI, the first line recommendation is GASTROINTESTINAL.² A food elimination trial is recommended for cases of chronic colitis or diarrhoea.

LOW FAT

For the nutritional management of dogs needing a fat restricted diet.

FIBRE BALANCE

Limited fibre content to allow provision of maintenance energy levels despite fat restriction.

DIGESTIVE SUPPORT

A highly digestible formula with balanced fibres, including prebiotics, to support healthy digestion and transit.

This diet is formulated to promote a healthy urinary environment.

KEY VALUES

	Per 1000 kcal	Per 100g as fed
Ash	20.65 g	1.90 g
Moisture	804.00 g	74.00 g
Protein	86.96 g	8 g

Omega-6	4.35 g	0.40 g
Omega-3	0.54 g	0.05 g
EPA +DHA	0.33 g	0.03 g
Calcium	2.50 g	0.23 g
Phosphorus	1.63 g	0.15 g
Sodium	1.74 g	0.16 g
Chloride	2.28 g	0.21 g
Potassium	1.74 g	0.16 g
Magnesium	0.33 g	0.03 g
Copper	3.80 mg	0.35 mg
Zinc	27.17 mg	2.50 mg
Taurine	0.43 g	0.04 g
Vitamin A	8696 IU	800 IU
Vitamin D	207 IU	19 IU

Metabolisable energy*

92 Kcal

*Calculated according to NRC 2006 CF.

COMPOSITION

Pork by-products, rice flour, maize grits, poultry by-products, pork blood products, maize flour, powder cellulose, minerals, dried beet pulp, fish oil, yeasts and part thereof, marigold meal.

ADDITIVES (KG)**

Nutritional additives: Vitamin D3: 170 IU, Vitamin E: 140 mg, Vitamin C: 70 mg, Taurine: 0.4 g, Iron (3b103): 4 mg, Iodine (3b202): 0.23 mg, Copper (3b405, 3b406): 1.8 mg, Manganese (3b502, 3b503, 3b504): 1.2 mg, Zinc (3b603, 3b605, 3b606): 12 mg - Technological additives: Clinoptilolite of sedimentary origin: 2.5 g.

** Values reflect only levels added to the formula, not those naturally occurring in components of the diet.

GASTROINTESTINAL

LOW FAT

SMALL DOGS

Available in
1.5, 3.5 and
8 kg bags

RECOMMENDED DAILY INTAKE & FEEDING DURATION

ADULT DOG	DOG'S WEIGHT (kg)	BODY CONDITION		
		THIN	NORMAL	OVERWEIGHT
		grams	grams	grams
	2	61	53	46
	3	82	72	63
	4	102	90	78
	5	121	106	92
	6	138	122	105
	7	155	137	118
	8	172	151	131
	9	188	165	143
	10	203	179	154

Initially, a feeding duration of up to 2 months is advised. For chronic conditions, lifelong feeding may be necessary. The feeding duration varies depending on the severity of gastrointestinal signs.

To optimise digestion, the recommended daily intake should be divided into several small meals.

This diet is formulated to promote a healthy urinary environment.

GASTROINTESTINAL DISORDERS

RECOMMENDED FOR CASES OF

- Hyperlipidaemia
- Acute and chronic pancreatitis
- Lymphangiectasia, exudative enteropathy
- Exocrine Pancreatic Insufficiency (EPI)¹
- Delayed gastric emptying, oesophagitis
- Acute and chronic diarrhoea²

NOT RECOMMENDED IN CASES OF

- Growth, gestation/lactation

¹ In these cases the recommended product is GASTROINTESTINAL.

² A food elimination trial is recommended for cases of chronic colitis or diarrhoea.

LOW FAT

For the nutritional management of dogs needing a fat restricted diet.

FIBRE BALANCE

Limited fibre content to allow provision of maintenance energy levels despite fat restriction.

DIGESTIVE SUPPORT

A highly digestible formula with balanced fibres, including prebiotics, to support healthy digestion and transit.

KEY VALUES

	Per 1000 kcal	Per 100g as fed

Vitamin A	5346.82 IU	1850.00 IU
Vitamin D	317.92 IU	110.00 IU
Metabolisable energy*		346.00 Kcal*

Calculated according to NRC 2006 CF.

COMPOSITION

Rice, dehydrated poultry proteins, maize, barley, hydrolysed animal proteins, beet pulp, animal fats, minerals, psyllium husks and seeds, yeasts products, mono- and diglycerides of palmitic and stearic acids esterified with citric acid, fish oil, fructo-oligosaccharides (0.48%), yeasts (source of manno-oligosaccharides), marigold meal.
Highly digestible ingredients: 80.9%.

ADDITIVES (KG)**

Nutritional additives: Vitamin A: 17000 IU, Vitamin D3: 1100 IU, Vitamin E: 510 mg, Vitamin C: 260 mg, Taurine: 1.2 g, Iron [3b103]: 39 mg, Iodine [3b201, 3b202]: 3.9 mg, Copper [3b405, 3b406]: 12 mg, Manganese [3b502, 3b504]: 51 mg, Zinc [3b603, 3b605, 3b606]: 134 mg, Selenium [3b801, 3b811, 3b812]: 0.07 mg - Technological additives: Clinoptilolite of sedimentary origin: 5 g - Preservatives, Antioxidants.

** Values reflect only levels added to the formula, not those naturally occurring in components of the diet.

GASTROINTESTINAL

LOW FAT

SMALL DOGS

GASTROINTESTINAL

HIGH FIBRE

Available in
2, 7.5 and
14kg bags

RECOMMENDED DAILY INTAKE & FEEDING DURATION

ADULT DOG

70	943	830	717
80	1043	918	792

The feeding duration varies depending on the severity of gastrointestinal signs. To optimise digestion, the recommended daily intake should be divided into several small meals. For the mixed feeding table please see the end of the section Gastrointestinal Tract.

GASTROINTESTINAL DISORDERS

RECOMMENDED FOR CASES OF

- Conditions requiring a high fibre level¹
- Fibre responsive colitis / diarrhoea (including stress diarrhoea)
- Chronic Idiopathic Large Bowel Diarrhoea (CILBD)
- Acute and chronic Diarrhoea²

NOT RECOMMENDED IN CASES OF

- Growth, gestation or lactation
- Obstipation • Obstruction
- Pancreatitis or history of pancreatitis³ • Hyperlipidaemia³
- Lymphangiectasia, exudative enteropathy³

1 A fibre rich diet may support dogs suffering with constipation, however it may also increase faecal volume which is contraindicated in some cases of constipation, particularly if associated with dehydration, obstipation and/or obstruction. For these cases a low residue diet such as GASTROINTESTINAL may be recommended.

2 A food elimination trial is recommended for cases of chronic colitis or diarrhoea.

3 In these cases the recommended diet is GASTROINTESTINAL LOW FAT.

HIGH FIBRE

A fibre rich diet with an optimal blend of fibre to help regulate intestinal transit.

ADEQUATE ENERGY

Provides maintenance energy levels despite high fibre content.

DIGESTIVE SUPPORT

A highly digestible formula with balanced fibres, including prebiotics, to support healthy digestion and transit.

KEY VALUES

Feeding duration varies depending on the pathology and on the regenerative ability of the hepatic tissue. Lifelong feeding may be necessary in case of chronic disease. In order to reduce the postprandial hepatic load, it is recommended to divide the recommended daily intake into several small meals.

LIVER DISEASE

RECOMMENDED FOR CASES OF

- Chronic hepatitis associated with liver dysfunction
- Portosystemic shunt
- Hepatic encephalopathy
- Copper storage disease

NOT RECOMMENDED IN CASES OF

- Pancreatitis or history of pancreatitis
- Hyperlipidaemia
- Acute hepatitis without hepatic encephalopathy¹
- Growth, gestation/lactation

¹ In this case the recommended products are GASTROINTESTINAL or RECOVERY.

ADAPTED PROTEIN CONTENT

Adapted levels of highly digestible vegetable proteins to support liver function in case of chronic liver insufficiency.

LOW COPPER

Low level of copper to help minimise its accumulation in liver cells.

HIGH ENERGY

A high energy content to reduce meal volume and decrease intestinal load.

KEY VALUES

Taurine	0.35 g	0.05 g
Vitamin A	3190.44 IU	454.00 IU
Vitamin D	274.00 IU	39.00 IU
Metabolisable energy*		142.30 Kcal

Calculated according to NRC 2006 CF.

COMPOSITION

Poultry by-products, rice, maize grits, maize flour, powder cellulose, fish oil, sunflower oil refined, minerals, dried beet pulp, yeasts and part thereof, fructo-oligosaccharides, marigold meal.
Protein sources: poultry by-products (27.8%).

ADDITIVES (KG)**

Nutritional additives: Vitamin D3: 358 IU, Vitamin E: 300 mg, Vitamin C: 105 mg, Taurine: 0.5 g, Iron (3b103): 31 mg, Iodine (3b202): 0.83 mg, Copper (3b405, 3b406): 0.5 mg, Manganese (3b502, 3b503, 3b504): 12.1 mg, Zinc (3b603, 3b605, 3b606): 77 mg, Selenium (3b801, 3b811, 3b812): 0.05 mg.

** Values reflect only levels added to the formula, not those naturally occurring in components of the diet.

ULTRA SOFT MOUSSE

Available in
195g can

RECOMMENDED DAILY INTAKE & FEEDING DURATION

ADULT DOG	RECOVERY				
	DOG'S WEIGHT (kg)	Level 1 convalescing dog, confined in a cage		Level 2 active dog, ending their convalescence period, or in maintenance	
		grams		grams	
		grams	cans	grams	cans
	2	95	1/2	155	3/4
	4	160	3/4	260	1 + 1/4
	6	217	1	353	1 + 3/4
	8	269	1 + 1/2	438	2 + 1/4
	10	318	1 + 3/4	517	2 + 3/4
	15	431	2 + 1/4	701	3 + 1/2
	20	534	2 + 3/4	870	4 + 1/2
	25	632	3 + 1/4	1029	5 + 1/4
	30	724	3 + 3/4	1179	6
	35	813	4 + 1/4	1324	6 + 3/4
	40	899	4 + 1/2	1463	7 + 1/2
	45	982	5	1599	8 + 1/4
	50	1062	5 + 1/2	1730	8 + 3/4
	55	1141	5 + 3/4	1858	9 + 1/2
	60	1218	6 + 1/4	1984	10 + 1/4
	70	1367	7	2227	11 + 1/2
	80	1511	7 + 3/4	2461	12 + 1/2

Two energy levels are described for hospitalised dogs:

• **Level 1: Convalescing dogs confined in cage**

It is advised to meet the Resting Energy Requirements [R.E.R] according to the formula: $RER \text{ (in kcal/day)} = 70 \times \text{body weight in kg}^{0.75}$

• **Level 2: Dog ending their convalescence period, or in maintenance**

It is advised to meet the Maintenance Energy Requirements [M.E.R] according to the formula: $MER \text{ (in kcal/day)} = 95 \times \text{body weight in kg}^{0.75}$

The amount of food should be reevaluated according to the clinical evolution of the pet. In case of anorexia, a **refeeding schedule** is strongly recommended:

• **If anorexic for < 3 days:** plan to meet the requirements in 3 days:

Day 1: 1/3 of requirements, day 2: 2/3 of requirements, day 3:

Full requirements.

• **If anorexic for > 3 days:** plan to meet the requirements in 5 days:

Day 1: 1/4 of requirements, day 2: 1/2 of requirements,

day 3: 2/3 of requirements, day 4: 3/4 of requirements,

day 5: Full requirements.

It is recommended to divide the daily intake into several small meals.

CONVALESCENCE PERIOD

RECOMMENDED FOR CASES OF

- Re-feeding after anorexic period • Malnutrition
- Post-surgery and intensive care • Convalescence
- Tube feeding (tubes with diameter > 10Fr)¹

NOT RECOMMENDED IN CASES OF

- Pancreatitis²
- Hepatic encephalopathy³

¹ In tubes with diameter < 10Fr, use RECOVERY LIQUID.

² In this case the recommended product is GI LOW FAT LIQUID.

³ In this case the recommended product is RENAL LIQUID.

HIGH ENERGY

High energy density that provides daily energy requirements in a reduced feeding volume.

EASY TUBE FEEDING

Specific texture that facilitates feeding by syringe and through feeding tubes.

HIGH PROTEIN

High protein level to help maintain muscle mass during hospitalisation and convalescence.

KEY VALUES

	Per 1000 kcal	Per 100g as fed

	70	862 g	759 g	655 g
	80	953 g	839 g	724 g

ROYAL CANIN® GASTROINTESTINAL LOW FAT + HYPOALLERGENIC dry is a complete dietetic feed for dogs, formulated for the support of lipid metabolism in the case of hyperlipidaemia and for the reduction of ingredient and nutrient intolerances. Low level of fat. Hydrolysed protein sources and selected carbohydrate sources.

RECOMMENDATIONS: It is recommended that a veterinarian's opinion be sought before use and before extending the period of use. Feed GASTROINTESTINAL LOW FAT + HYPOALLERGENIC dry for 3 to 8 weeks; if signs of intolerance disappear this feed can be used initially up to one year, and initially up to 2 months for the support of lipid metabolism in the case of hyperlipidaemia

RECOMMENDED FOR CASES OF

- Inflammatory Bowel Disease (IBD)
- Exocrine Pancreatic Insufficiency (EPI)
- Adverse Food Reactions (AFR) with gastrointestinal signs
- Lymphangiectasia, exudative enteropathy
- Protein-losing enteropathy (PLE)
- Acute and chronic pancreatitis
- Hyperlipidaemia

NOT RECOMMENDED FOR CASES OF

- Growth, gestation/lactation

LOW FAT

For the nutritional management of dogs needing a fat-restricted diet.

FIBRE BALANCE

Limited fibre content to allow provision of maintenance energy levels despite fat restriction.

DIGESTIVE SUPPORT

A highly digestible formula with balanced fibres, including prebiotics, to support healthy digestion and transit.

HYDROLYSED PROTEIN

Highly digestible hydrolysed (soy) protein, reducing the risk of food sensitivities that may cause recurrent gastrointestinal signs.

KEY VALUES

	Per 1000Kcal	Per 100g as fed
Moisture	27.08 g	9.5 g

	25	760	3 + 3/4
	30	875	4 + 1/2
	35	980	5
	40	1085	5 + 1/2
	50	1280	6 + 1/2
	60	1470	7 + 1/4
	70	1650	8 + 1/4
	80	1825	9 + 1/4

DOGS CONFINED IN CAGE It is advised to meet the Resting Energy Requirements [R.E.R] according to the formula: **RER (in kcal/day) = 70x (body weight in kg)^{0.75}**. The amount of food should be re-evaluated according to the clinical evolution of the pet. In case of anorexia, a **re-feeding schedule** is strongly recommended:

• **If anorexic for < 3 days:** plan to meet the requirements in 3 days. Day 1: 1/3 of requirements, day 2: 2/3 of requirements, day 3: full requirements.

• **If anorexic for ≥ 3 days:** plan to meet the requirements in 5 days. Day 1: 1/4 of requirements, day 2: 1/2 of requirements, day 3: 2/3 of requirements, day 4: 3/4 of requirements, day 5: full requirements.

It is recommended to divide the daily intake into several small meals.

ROYAL CANIN® RECOVERY LIQUID is a complete dietetic feed for cats and dogs formulated for nutritional restoration and convalescence (including for feline hepatic lipidosis). High energy density, high concentrations of essential nutrients and highly digestible ingredients.

RECOMMENDATIONS: your advice as a veterinarian is necessary before use of this diet, and administration under veterinary supervision. Feed this diet until restoration is achieved.

CONVALESCENCE PERIOD

RECOMMENDED FOR TUBE-FEEDING IN CASES OF

- Convalescence • Re-feeding after anorexic period
- Malnutrition • Post-surgery and intensive care
- Acute and chronic diarrhoea

NOT RECOMMENDED IN CASES OF

- Hepatic encephalopathy¹
- Pancreatitis or history of pancreatitis²
- Hyperlipidaemia¹
- Lymphangiectasia, exudative enteropathy²
- Growth, gestation and lactation

¹ In cases of hepatic encephalopathy the recommended diet is Renal Liquid.

² In this case the recommended diet is Gastrointestinal Low Fat Liquid.

HIGH PROTEIN

High protein level to help maintain muscle mass during hospitalisation and convalescence.

ADAPTED ENERGY (1kcal/mL)

High energy density that provides daily energy requirements in a reduced feeding volume.

COMPLETE NUTRITION

Complete and balanced liquid diet to support nutritional restoration and convalescence of dogs requiring assisted enteral nutrition.

EASY TUBE FEEDING

Liquid formula with adapted viscosity for an easy use whatever the tube size.

SPECIAL CAP – EASY TO FILL

Cap designed for easy filling, with one hole for standard-tip syringes (the smaller) and another for catheter-tip syringes.

KEY VALUES

	Per 1000 kcal	Per 100g as fed

DOGS CONFINED IN CAGE

It is advised to meet the Resting Energy Requirements (R.E.R) according to the formula: **RER (in kcal/day) = 70x (body weight in kg)^{0.75}** The amount of food should be re-evaluated according to the clinical evolution of the pet. In case of anorexia, a **refeeding schedule** is strongly recommended:

- **If anorexic for < 3 days:** plan to meet the requirements in 3 days. Day 1: 1/3 of requirements, day 2: 2/3 of requirements, day 3: full requirements.
- **If anorexic for ≥ 3 days:** plan to meet the requirements in 5 days. Day 1: 1/4 of requirements, day 2: 1/2 of requirements, day 3: 2/3 of requirements, day 4: 3/4 of requirements, day 5: full requirements.

It is recommended to divide the daily intake into several meals and have fresh water available at all times.

ROYAL CANIN® GI LOW FAT LIQUID is a complete dietetic feed for dogs formulated for the support of lipid metabolism in case of hyperlipidaemia and for nutritional restoration and convalescence. Low level of fat, high energy density, high concentrations of essential nutrients and highly digestible ingredients.

RECOMMENDATIONS: your advice as a veterinarian is necessary before use and before extending the period of use of this diet. Feed this diet initially up to 2 months in case of hyperlipidaemia or until restoration is achieved. Administration under veterinary supervision

CONVALESCENCE PERIOD

RECOMMENDED FOR TUBE-FEEDING IN CASES OF

- Re-feeding after a period of anorexia
- Acute and chronic diarrhoea
- Acute and chronic pancreatitis¹
- Hyperlipidaemia
- Lymphangiectasia, exudative enteropathy
- Delayed gastric emptying.
- Exocrine Pancreatic Insufficiency (EPI).
- Gastritis, oesophagitis

NOT RECOMMENDED IN CASES OF

- Growth, gestation and lactation

¹ In case of associated diabetes mellitus, insulin adjustments may be required (due to quickly assimilable carbohydrate content).

² 2 In cases of EPI GASTROINTESTINAL HIGH ENERGY LIQUID is recommended.

LOW FAT

Formulated with low fat levels to help support dogs requiring fat restriction.

ADAPTED ENERGY (1kcal/ml)

High energy density that provides

High energy density that provides daily energy requirements in a reduced feeding volume.

COMPLETE NUTRITION

Complete and balanced liquid diet to support nutritional restoration and convalescence of dogs requiring assisted enteral nutrition.

EASY TUBE FEEDING

Liquid formula with adapted viscosity for an easy use whatever the tube size.

SPECIAL CAP - EASY TO FILL

Cap designed for easy filling, with one hole for standard-tip syringes (the smaller) and another for catheter-tip syringes.

80	1	911	786	661

1 can is equivalent to 124g of GASTROINTESTINAL HIGH FIBRE dry product.

GUIDELINES

NUTRITION OF CRITICALLY ILL PATIENTS

When managing a critical care patient, the delivery of adequate and appropriate nutrition is key. Below are some guidelines for assessing your feline and canine cases and implementing a feeding plan.

STEPS TO ESTABLISHING A FEEDING PROTOCOL

1

CALCULATE DAILY RESTING ENERGY REQUIREMENTS (RER) DURING HOSPITALISATION

for adult dogs/cats: RER (Resting Energy Requirements)

- $\text{RER (in kcal)} = 70 \times (\text{body weight in kg})^{0.75}$

2

ASSESS INDICATIONS FOR ASSISTED FEEDING:

- a. Inability to eat (e.g. jaw fractures, neuro cases)
- b. Hepatic lipidosis
- c. Anorexia ≥ 3 days and/or hyporexia (consumption $\leq 80\%$ RER) ≥ 5 days

CHOOSE A TUBE

3

Nasoesophageal/ Nasogastric tubes	Short term (<5 days)	Inexpensive Easy to place No general anaesthesia required	Requires a completely liquid diet, limiting choice. Some animals will not eat with these tubes in place.
Oesophagostomy tubes	Long term	Inexpensive Easy to place Can use calorically dense diets	Requires general anaes- thesia for placement. Cellulitis and infection can develop at the stoma site

REFEEDING SCHEDULE

4

Anorexia duration	Recommendation	Application*
No anorexia	Assess tolerance 1st day	D1: 1/2 RER; D2: RER
Anorexia <3 days	Reach RER over 3 days	D1: 1/3 RER; D2: 2/3 RER, D3: RER
Anorexia ≥ 3 days	Reach RER over 5 days	D1: 1/4 RER; D2: 1/2 RER, D3: 2/3 RER, D4: 3/4 RER, D5: RER

* To be adjusted according to the patient's tolerance

ENCOURAGING SPONTANEOUS FEEDING

- Offer the patient its usual food (in a familiar format)
- Warm food to enhance flavours
- Avoid medications in food or painful procedures (to avoid food aversion)
- Weigh food before and after meals to check calorie consumption (goal: $\geq$ RER if not combined with tube feeding)

TUBE FEEDING TOP TIPS

- Check tube placement prior to use**
- Warm all food to room or body temperature prior to use
- Administer the feed over 15-20 minutes. Stop feeding if the patient begins to retch, vomit or regurgitate and reassess
- Flush the tube before and after feeding with warm water to clear the tube of any food. Recap the tube securely
- Tube blockage – instill 5-20mls of carbonated drink and leave for 1-2 hours to dissolve blockage. If the blockage is still present, the tube position may need to be checked

** Check tube position prior to use: use the lines on the tube to detect a possible migration. For naso-oesophageal tubes and oesophagostomy tubes, the following may help ensuring the right position of the tube:

- Instill 2-5mls of sterile saline solution – no cough response should be seen
- Aspirate the tube using an empty syringe – a vacuum should be present
- Radiography

Check the stoma site for signs of pain, swelling or discharge. This should be done at each feed.

REFEEDING SCHEDULES ACCORDING TO ANOREXIA DURATION

ANOREXIA < 3 DAYS							
BW (kg)	RER (kcal)	Day 1 1/3 RER		Day 2 2/3 RER		Day 3 100% RER
